

Mahmoud Shaaban Elsayed Ghoniem

Artificial Intelligence Student & Machine Learning Developer

Dakahlia, Egypt | +20 103 072 4454 | ms4387312@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFILE

Artificial Intelligence student (Machine Intelligence, Menoufia University) with hands-on experience in Python programming, data analysis, and machine learning. Built predictive models covering regression, classification, and exploratory data analysis on real-world datasets, applying feature engineering and standard evaluation metrics (RMSE, R^2 , F1-score, precision, recall). Seeking an international internship or junior role in Machine Learning / Data Analysis.

EDUCATION

BSc in Machine Intelligence – Faculty of Artificial Intelligence

Expected 2027

Menoufia University | Egypt

TRAINING PROGRAM

AI & Data Science – Microsoft Machine Learning Engineer Track

In Progress – Expected Dec 2026

Digital Egypt Pioneers Initiative (DEPI). Intensive applied track covering the full Microsoft ML engineering curriculum, from data preprocessing to deployment on Azure.

- Machine Learning Techniques, Deep Learning, and Natural Language Processing with Attention Models
- Computer Vision and Transfer Learning
- Azure AI Fundamentals and Azure AI Engineer Associate
- MLOps Tools, MLflow, and Hugging Face
- Capstone Project

TECHNICAL SKILLS

Programming Languages: Python, C++, SQL

Machine Learning: Supervised Learning, Regression, Logistic Regression, Random Forest, Classification

Data Science: Exploratory Data Analysis (EDA), Feature Engineering, Data Cleaning, Data Visualization

Libraries / Frameworks: NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn, TensorFlow

Tools & Platforms: GitHub, VS Code, MATLAB, Oracle, Prolog, Multisim

PROJECTS

House Prices Prediction

2025

- Built a regression model to predict house prices using Random Forest Regression as a baseline.
- Applied feature engineering, data cleaning, and exploratory data analysis on a real estate dataset.
- Evaluated model performance using RMSE and R^2 regression metrics.

Student Performance Prediction

2025

- Developed a Random Forest classification model to predict student academic outcomes.
- Performed feature selection and data preprocessing on a student performance dataset.
- Achieved strong classification accuracy, evaluated using F1-score, precision, and recall.

Machine Learning Data Analysis – Titanic Dataset

2024

- Processed a dataset of 891 records and 12 features using Pandas and NumPy.
- Built classification models (Logistic Regression, Random Forest), achieving 80%+ accuracy.
- Visualized correlations and key insights using Matplotlib.

Restaurant Management System

2024

- Designed a console-based system in C++ using object-oriented programming (OOP) principles.
- Managed customer orders, billing, and menu operations with reusable class structures.

CERTIFICATIONS

Machine Learning Specialization – Course 1: Supervised Learning (Regression and Classification)

2026

Andrew Ng, DeepLearning.AI / Coursera. Covered Linear Regression, Logistic Regression, Gradient Descent, and Regularization.

Introduction to Modern AI

2025

Cisco Networking Academy

Boost Your Productivity with AI

2024

Google / Mahara
